

CLAIMS

1. A baby bottle harness apparatus, comprising;
 - a) a sleeve for holding a bottle, the sleeve having an upper and a lower end portion and a hollow interior for
5 containing the bottle;
 - b) a pair of bands that attach to the sleeve;
 - c) left and right straps, each in the form of a loop that encircles the child's shoulder area, each loop extending over the child's shoulder and under his or her armpit, the
10 loops being each attached respectively to the upper end portion of one of the bands.
 - d) a rear, transversely extending strap that extends across the child's upper back area forming a connection between each of the loops;
 - 15 e) and wherein the sleeve and bottle in combination are suspended with sufficient distance provided by the bands that the bottle and sleeve occupy a position close to the child's hands when the child's hands are extended downwardly along his or her sides and wherein the bottle and sleeve can be lifted
20 to the child's mouth area but not above the child's head without applying undue tension to the bands or to the loops.
